ECOMONDO 2017 RIMINI > IT

Ecomondo 2017: the benchmark fair for green economy in the Euro-Mediterranean area

The date with Ecomondo was renewed this year too, from 7 to 10 November, the leader fair for green and circular economy in the Euro- Mediterranean area, a unique event that involves all circular economy sectors: from recycling materials and energy to sustainable development. All the leading market companies met in the splendid frame that is Rimini, their purpose being to get to know and present new trends, innovations and technologies in this sector and at the same time measure themselves against professionals from all over the world.

PTC's new products: the Eco WeedKiller lance, the improved Urban Cleaning range, the Scimitar nozzles and much more besides

Ecomondo 2017 is the ideal stage on which to propose PTC'S new products for 2018 to customers and suppliers alike and the stunningly new ideas for ecological weed killing played a truly important role.

The PTC Eco Weed Killer lance has been specifically designed for the PTC hot water pressure units which means that all weeds are eliminated using just the effect of steam – the use of herbicides and/or pesticides now being obsolete.

The Urban Cleaning range, represented at the fair by the Built-in Whale and Moses (ultra compact models for vans and small lorries) has been completely re-organised and optimised, promoting the strong points and improving the quality to price ratio further still.

One whole side of the stand was allocated to a selection of HPP pumps (for which PTC is the sole distributor) usable in many different application sectors – from Urban Cleaning to Water Jetting with the H series being the absolute star with fourth-generation manifolds.

This year it was also decided to give greater importance to accessories and solutions for unclogging pipes; a large area on the stand was in fact dedicated to an array of TVI cameras for video-inspections and a wide assortment of ENZ nozzles.

The new HPP Scimitars are worthy of special mention: exclusive nozzles for Water Jetting, ideal for treating surfaces, combining a modern design with extreme efficacy as well as great ease of use and maintenance.
